

**CROSBY OMNI-TRIM®**  
DIRECT SPRING PRESSURE RELIEF VALVES

Reliable and economical overpressure protection for thermal relief and many more applications

**FEATURES**

- ASME/NB certified capacities for air, water and steam.
- Full compliance with all major global pressure relief standards including ASME VIII, API 527, EN4126, PED/CE and numerous other standards.
- Series 900 uses single trim design for liquid, gas, and vapor services.
- Highly customizable to meet most applications.
- Interchangeable parts to reduce maintenance costs.
- Full nozzle configuration.
- Simple and reliable design.
- Easy maintenance.
- Soft seat options for superior seat tightness.
- BP balanced piston option to offset the effects of variable back pressure.

**GENERAL APPLICATION**

The Crosby OMNI-TRIM pressure relief valve is the proven solution for overpressure protection and/or thermal relief applications on air, gas, vapor, liquid and steam. Its simple design makes it ideal for refineries, chemical and petrochemical plants, power plant auxiliary systems and pulp and paper mills.

**TECHNICAL DATA**

Sizes:	1/2" x 1" to 2" x 2" and 1 1/2" x 2 1/2" (DN 15 x 25 to 50 x 50 and 40 x 65)
Orifices:	0.074 to 0.503 in <sup>2</sup> (47.7 to 325 mm <sup>2</sup> )
Connections:	NPT, flanged, male socket weld
Temperature range:	-450 to +750°F (-268 to +399°C)
Set pressures:	5 to 5000 psig (0.34 to 345 barg)
Steam limit:	1000 psig (69 barg)
Codes:	ASME VIII and III

**Series 900 OMNI-TRIM**

Series 900 OMNI-TRIM pressure relief valves provide overpressure protection on air, gas, vapor, liquid thermal relief and steam service. Maximum fixed blowdown is typically 20% or less. Standardization of components in the OMNI-TRIM provides easy assembly, durability, ease of maintenance and lower inventory costs. The design and wide array of options provide maximum versatility and premium performance.

- Sizes: ½" x 1" to 2" x 2" and 1½" x 2½"
- Orifices: 0.074 to 0.503 in<sup>2</sup>  
(47.74 to 324.5 mm<sup>2</sup>)
- Connections: NPT, flanged, male socket weld
- Temperature range: -450 to +750°F (-268 to +399°C)
- Set pressures: 5 to 5000 psig  
(0.34 to 344.83 barg)
- Steam limit: 1000 psig
- Code: ASME VIII and ASME III  
(15 psig and above)

**Series BP OMNI-TRIM®**

Series BP OMNI-TRIM® pressure relief valve is a piston, single trim designed valve for gas, vapor and liquid applications involving variable back pressure. Full nozzle design with O-ring seat as standard.

- Sizes: ¾" x 1" and 1" x 1"
- Orifices: 0.074 and 0.110 in<sup>2</sup>  
(47.74 and 71 mm<sup>2</sup>)
- Connections: NPT, flanged
- Temperature range: -20 to +400°F (-28 to +204°C)
- Set pressures: 50 to 1500 psig  
(3.45 to 103.44 barg)
- Code: ASME VIII and ASME III

# CROSBY OMNI-TRIM®

## SERIES 900 FIXED BLOWDOWN OMNI-TRIM PRESSURE RELIEF VALVE

### PRODUCT OVERVIEW

Series 900 OMNI-TRIM pressure relief valves provide overpressure protection on air, gas, vapor, liquid thermal relief and steam service. Maximum fixed blowdown is typically 20% or less. Standardization of components in the OMNI-TRIM provides easy assembly, durability, ease of maintenance and lower inventory costs. The design and wide array of options provide maximum versatility and premium performance.

### ASME code requirements

The valves are manufactured to ASME Boiler and Pressure Vessel Code, Section VIII for pressures of 15 psig (1.03 barg) and above and can also be manufactured to Section III for nuclear-related applications.

### Other type approvals and certifications

- Canadian Registration Number (CRN)
- China Manufacturing License (TS)
- Pressure Equipment Directive (97/27/EC), (ISO-4126-1) (OE)
- United States Coast Guard (USCG)

### Connections

The Series 900 OMNI-TRIM is supplied with screwed inlet and outlet connections as standard but is also available with optional flanged end connections or male socket weld ends. Standard flanged end connections are lap joint stub end construction. Optional flanged end connections with unique face-to-face dimensions to match existing installations are also available. Contact your sales representative for availability of these and other special designs.

For installations where a bolted cylinder is preferred for maintenance reasons, a special version of the No. 5 orifice is available in 3/4" x 1 connection size only. This valve is designated as 95110199A and has a maximum set pressure of 1500 psig (103 barg). Standard connections are 3/4" x 1 MNPT x FNPT. For optional flanged construction, please contact your sales representative.

### Seat design

The valve is available with flat metal-to-metal, elastomer or TFE O-ring soft seats for optimum seat tightness and minimal maintenance. O-rings are standard commercial sizes.

### O-RING SOFT SEAT MATERIALS<sup>(1)</sup> AND PRESSURE/TEMPERATURE LIMITS

Material	Set pressure psig (barg)		Inlet temperature °F (°C)	
	Minimum	Maximum	Minimum	Maximum
Buna-N	15 (1.03)	2500 (172.41)	-50 (-45.6)	+250 (+121.1)
Viton® <sup>(3)</sup> (FKM)	15 (1.03)	2500 (172.41)	0 (-17.8)	+400 (+204.4)
EPR <sup>(2)</sup>	15 (1.03)	2500 (172.41)	-50 (-45.6)	+250 (+121.1)
Kalrez® <sup>(2)</sup>	15 (1.03)	2500 (172.41)	0 (-17.8)	+500 (+260.0)
TFE <sup>(2)</sup>	100 (6.89)	2500 (172.41)	-50 (-45.6)	+500 (+260.0)
Silicone	15 (1.03)	1500 (103.44)	-50 (-45.6)	+400 (+204.4)

### NOTES

1. Metal-to-metal seats are recommended for steam service. Contact your sales representative if soft seats are required.
2. EPR = ethylene propylene rubber, TFE = tetrafluorethylene. Kalrez® is a registered trademark of DuPont Dow Elastomers.
3. Viton® is a registered trademark of DuPont Performance Elastomers L.L.C.

## SERIES BP BALANCED OMNI-TRIM PRESSURE RELIEF VALVE

### PRODUCT OVERVIEW

Series BP OMNI-TRIM® pressure relief valve is a piston, single trim designed valve for gas, vapor and liquid applications involving variable back pressure. Full nozzle design with O-ring seat as standard.

#### Back pressure

The maximum allowable back pressure in liquid applications is 70% of set pressure; in vapor and gas applications it is 50% and for liquid thermal relief applications 90% of set pressure. Note: The maximum back pressure rating is 400 psig (27.58 barg). For back pressures greater than 400 psig (27.58 barg), consult Crosby.

#### Blowdown

Series BP blowdown is fixed and non-adjustable (typically 25% or less) on liquid, gas and vapor applications.

#### Optional connections

The valves may be furnished with optional flanged connections up to ANSI Class 1500. Standard flanged connections are lap joint stub end construction.

#### Materials

Optional materials of construction are available for special applications or conditions involving corrosive fluids. In addition, materials are available conforming to NACE MR-0175. Contact your sales representative for compliance to NACE MR-0175-2003 or later requirements.

Special cleanings, coatings and lubricants are also available on application.

#### ASME code requirements

Series BP pressure relief valves are manufactured to ASME Boiler and Pressure Vessel Code, Sections VIII and III.

#### Other type approvals and certifications

- Canadian Registration Number (CRN)
- China Manufacturing License (TS)
- Pressure Equipment Directive (97/27/EC), (ISO-4126-1) (OE)

#### Seat design

Valves are available with elastomer or TFE O-ring soft seats for optimum seat tightness and minimal maintenance. All O-rings are standard commercial sizes.

Materials in bold indicate variation from standard.

Crosby Series 900 OMNI-TRIM® and Series BP pressure relief valves are furnished with a threaded cap over the adjusting bolt as a standard. Optional cap types and lifting levers are:

1. Standard threaded cap (Type A)  
Where no lifting lever is required.
2. Threaded cap with test rod (Type B)  
Normally used to hold the pressure relief valve closed when the system is being tested hydrostatically.
3. Packed lifting lever (Type D)  
For applications where periodic testing is desirable. This is a sealed design for pressure integrity.

4. Packed lifting lever with test rod (Type E).  
Same as Type D except furnished with a test rod.

#### NOTE

ASME Boiler and Pressure Vessel Code rules require that a lifting lever must be supplied with the valve when the service is (1).ir, (2) water at the valve inlet that exceeds 140°F (60°C) excluding over pressure or relief events or (3) steam.

#### CAUTION

Test rods should never be tightened more than finger tight. Overtightening may damage internal parts. Moreover, a test rod should never be kept on the valve during operation of the equipment. During normal operation the test rod is replaced with cap plug and O-ring to maintain tightness on the discharge side.

\* Consult your sales representative for availability of no. 5 (0.074 sq. in.) orifice with FNPT inlet.

### NOTES

- Minimum/maximum set pressures and temperatures shown apply to metal seated valves only. Refer to page 5 for pressure and temperature limits for soft seat construction.
- Dimension 'C' shown is for Type A cap.  
For Type B cap, add 1/4 in. to 'C' dimension (an additional 2 in. is required for test rod head clearance).  
For Type D cap, add 5/8 in. to 'C' dimension.  
For Type E cap, add 7/8 in. to 'C' dimension (an additional 2 in. is required for test rod head clearance).
- Maximum set pressure for steam service is 1000 psig.
- Valves set below 15 psig cannot be stamped with the ASME Code Symbol. Only metal seated valves may be set below 15 psig. For set pressure applications below the published minimum values, consult your sales representative.
- See page 5.

9911( )7FF	1½	2½	7	1500	400	-450/+750	3⅞	3¼	15¾	32

\* Consult your sales representative for availability of no. 5 (0.074 sq. in.) orifice with FNPT inlet.

**NOTES**

1. Minimum/maximum set pressures and temperatures shown apply to metal seated valves only. Refer to page 5 for pressure and temperature limits for soft seat construction.
2. Dimension 'C' shown is for Type A cap.  
For Type B cap, add ¼ in. to 'C' dimension (an additional 2 in. is required for test rod head clearance).  
For Type D cap, add ⅝ in. to 'C' dimension.  
For Type E cap, add ⅞ in. to 'C' dimension (an additional 2 in. is required for test rod head clearance).
3. Maximum set pressure for steam service is 1000 psig.
4. Valves set below 15 psig cannot be stamped with the ASME Code Symbol. Only metal seated valves may be set below 15 psig. For set pressure applications below the published minimum values, consult your sales representative.

### NOTES

- Maximum set pressures shown are based on carbon steel flanges. Pressure limits for 316 SS flanges may be lower. Consult your sales representative.
- Maximum set pressures apply to metal seated valves only; refer to page 5 for limits for soft seat construction.
- ANSI CL 300 supplied; however, the maximum back pressure is 400 psig.
- Flanges are supplied with a serrated face per ANSI B16.5. Other facings/standards (i.e., DIN) are also available.
- Dimension 'C' shown is for Type A cap.  
For Type B cap, add 1/4 in. to 'C' dimension (an additional 2 in. is required for test rod head clearance).  
For Type D cap, add 5/8 in. to 'C' dimension.  
For Type E cap, add 7/8 in. to 'C' dimension (an additional 2 in. is required for test rod head clearance).
- Maximum set pressure for steam service is 1000 psig.
- ANSI CI 600 flange integral with base.

\* To obtain units in kPa, multiply barg units by 100.

\*\*Consult your sales representative for availability of no. 5 (47.74 sq. mm) orifice with FNPT inlet.

### NOTES

1. Minimum/maximum set pressures and temperatures shown apply to metal seated valves only. Refer to page 5 for pressure and temperature limits for soft seat construction.
2. Dimension 'C' shown is for Type A cap.  
For Type B cap, add 6 mm to 'C' dimension (an additional 51 mm is required for test rod head clearance).  
For Type D cap, add 16 mm to 'C' dimension.  
For Type E cap, add 22 mm to 'C' dimension (an additional 51 mm is required for test rod head clearance).
3. Maximum set pressure for steam service is 68.95 barg.
4. Valves set below 1.03 barg cannot be stamped with the ASME Code Symbol. Only metal seated valves may be set below 1.03 barg.

#### NOTES

- Maximum set pressures shown are based on carbon steel flanges. Pressure limits for 316 SS flanges may be lower. Consult your sales representative.
- Maximum set pressures apply to metal seated valves only; refer to page 5 for limits for soft seat construction.
- ANSI CL 300 supplied; however, the maximum back pressure is 27.58 barg.
- Flanges are supplied with a serrated face per ANSI B16.5. Other facings/standards (i.e., DIN) are also available.
- Dimension 'C' shown is for Type A cap.  
For Type B cap, add 6 mm to 'C' dimension (an additional 51 mm is required for test rod head clearance).  
For Type D cap, add 16 mm to 'C' dimension.  
For Type E cap, add 22 mm to 'C' dimension (an additional 51 mm is required for test rod head clearance).
- Maximum set pressure for steam service is 68.95 barg.
- ANSI CI 600 flange integral with base.

### NOTES

- Refer to page 7 for soft seat temperature limits.
- Dimension 'C' shown is for Type A cap.  
For Type B cap, add 1/4 in. (6 mm) to 'C' dimension (an additional 2 in. [51 mm] is required for test rod head clearance).  
For Type D cap, add 5/8 in. (16 mm) to 'C' dimension.  
For Type E cap, add 7/8 in. (22 mm) to 'C' dimension (an additional 2 in. [51 mm] is required for test rod head clearance).
- Add 1.6 lbs (0.7 kg) for Type D and E caps.

\* Series 800 capacities are in bold only.

### NOTES

1. Not valid below 30 psig set pressure.
2. Capacities below 30 psig set pressure are calculated at 3 psi overpressure.
3. The scope of the ASME Code, Section VIII, does not include pressures below 15 psig and therefore pressure relief valves set below 15 psig are not stamped with the ASME Code Symbol.

**Capacity in standard cubic feet per minute of air at 60°F and 10% overpressure. Valve discharging to atmospheric pressure.<sup>(2)</sup>**

Capacities certified by the National Board of Boiler and Pressure Vessel Inspectors and in accordance with the ASME Boiler and Pressure Vessel Code, Section VIII.

# CROSBY OMNI-TRIM®

#### NOTES

1. Not valid below 30 psig set pressure.
2. Capacities below 30 psig set pressure are calculated at 3 psi overpressure.
3. The scope of the ASME Code, Section VIII, does not include pressures below 15 psig and therefore pressure relief valves set below 15 psig are not stamped with the ASME Code Symbol.

#### Capacity in standard cubic feet per minute of air at 60°F and 10% overpressure. Valve discharging to atmospheric pressure.<sup>(2)</sup>

Capacities certified by the National Board of Boiler and Pressure Vessel Inspectors and in accordance with the ASME Boiler and Pressure Vessel Code, Section VIII.

#### NOTES

1. Differential pressure ( $\Delta P$ ) equals inlet pressure (set pressure plus overpressure) at flowing conditions minus back pressure.
2. See pages 15-18 for minimum and maximum set pressure limits.
3. The scope of the ASME Code, Section VIII, does not include pressures below 15 psig and therefore pressure relief valves set below 15 psig are not stamped with the ASME Code Symbol.

**Capacity in U.S. gallons per minute of water at 70°F and 10% overpressure.**

Capacities certified by the National Board of Boiler and Pressure Vessel Inspectors and in accordance with the ASME Boiler and Pressure Vessel Code, Section VIII.

### NOTES

1. Not valid below 2.0 barg set pressure.
2. Capacities below 2.0 barg set pressure are calculated at 0.2 bar overpressure.
3. The scope of the ASME Code, Section VIII, does not include pressures below 1.0 barg and therefore pressure relief valves set below 1.0 barg are not stamped with the ASME Code Symbol.

**Capacity in standard cubic meters of air per minute at 16°C and 10% overpressure.  
Valve discharging to atmospheric pressure.<sup>(2)</sup>**

Capacities certified by the National Board of Boiler and Pressure Vessel Inspectors and in accordance with the ASME Boiler and Pressure Vessel Code, Section VIII.

#### NOTES

1. Not valid below 2.0 barg set pressure.
2. Capacities below 2.0 barg set pressure are calculated at 0.2 bar overpressure.
3. Maximum set pressure for steam service is 68.95 barg.
4. The scope of the ASME Code, Section VIII, does not include pressures below 1.0 barg and therefore pressure relief valves set below 1.0 barg are not stamped with the ASME Code Symbol.

#### Capacity in kilograms per hour of steam at 10% overpressure. Valve discharging to atmospheric pressure.<sup>(2)</sup>

Capacities certified by the National Board of Boiler and Pressure Vessel Inspectors and in accordance with the ASME Boiler and Pressure Vessel Code, Section VIII.

#### NOTES

1. Differential pressure ( $\Delta P$ ) equals inlet pressure (set pressure plus overpressure) at flowing conditions minus back pressure.
2. See pages 19-22 for minimum and maximum set pressure limits.
3. The scope of the ASME Code, Section VIII, does not include pressures below 1.0 barg and therefore pressure relief valves set below 1.0 barg are not stamped with the ASME Code Symbol.

#### Capacity in liters per minute of water at 20°C and 10% overpressure.

Capacities certified by the National Board of Boiler and Pressure Vessel Inspectors and in accordance with the ASME Boiler and Pressure Vessel Code, Section VIII.

### NOTE

- To determine capacities on gases other than air, or for fluid temperatures other than 60°F (16°C), use the gas and vapor sizing formula in the Crosby Engineering Handbook.

### Note: for air capacities, USCS units are exact equivalents of imperial units.

The capacities listed in the table above are based on discharging to atmospheric pressure. For applications involving back pressure these capacities must be multiplied by the back pressure correction factor determined from the applicable curve shown on page 40.

### Capacity in standard cubic feet per minute of air at 60°F and 10% overpressure.

**Valve discharging to atmospheric pressure. (Capacity in standard cubic meters of air per minute at 16°C and 10% overpressure. Valve discharging to atmospheric pressure.)**

Capacities certified by the National Board of Boiler and Pressure Vessel Inspectors and in accordance with the ASME Boiler and Pressure Vessel Code, Section VIII.

#### NOTES

1. Differential pressure ( $\Delta P$ ) equals inlet pressure (set pressure plus overpressure) at flowing conditions minus back pressure.
2. See pages 23 and 24 for minimum and maximum set pressure limits.

**Note: USCS units for water and liquids are U.S. gallons per minute (1 U.S. gallon equals 0.833 imperial gallon).**

The capacities listed in the table above are based on discharging to atmospheric pressure. For applications involving back pressure these capacities must be multiplied by the back pressure correction factor determined from the applicable curve shown on page 40.

**Capacity in U.S. gallons per minute of water at 70°F and 10% overpressure. Capacities certified by the National Board of Boiler and Pressure Vessel Inspectors and in accordance with the ASME Boiler and Pressure Vessel Code, Section VIII. (Capacity in liters per minute of water at 21°C and 10% overpressure.)**

Capacities certified by the National Board of Boiler and Pressure Vessel Inspectors and in accordance with the ASME Boiler and Pressure Vessel Code, Section VIII.

### NOTES

- Maximum set pressure for steam service is 1000 psig (68.95 barg).
- See pages 11-24 for appropriate maximum set pressures.
- For steam service, a 17-4Ph disc holder is used.
- See pages 4, 6 and 8 for complete listing of materials of construction.
- See pages 11-24 for appropriate inlet and outlet sizes for each effective orifice area.
- For Series BP, seat and seal materials are identical except for valves with TFE seats. Seal material for valves with TFE seats is Viton®(FKM) unless specified otherwise.

### CAUTION

Refer to pages 11-24 for availability of orifice, connection size, and connection type combination selected.

<b>Model number supplements<sup>(4)</sup></b>					
<b>P</b>	PED certification				
<b>N2</b>	NACE MR0175-2002 Edition <sup>(3)</sup>				
<b>R</b>	TERV bolted cylinder				
<b>S</b>	Steam trim set pressure above 150 psig - Series 800 and 900 only				
<b>B</b>	Forged block body configurations				
<b>SPL</b>	Non-standard option or configuration				

### AVAILABLE OPTIONS

#### Materials

- Special materials LCB, Alloy 20, Duplex, Titanium, etc.
- Special flange materials Monel®, Hastelloy® C, etc.
- Special O-ring seat materials.

#### Accessories

- Position indicator, proximity switch, etc.

#### Connections

- Weldneck flanges.
- Custom center-to-face dimensions.
- Special connections such as tri-clamp, GRAYLOC, etc.
- International flange standards.
- Flat face and RFSF flange options.

#### Others

- Special painting or coating.
- Special cleaning and testing.

### NOTES

1. Contact your sales representative for dimensions.
2. Not available with soft seats, contact your sales representative.
3. Contact your sales representative for compliance to NACE MR0175-2003 or later.
4. More than one model number supplement can be used at once.  
Examples:  
951101MFA  
96137121A-N2  
965X1222D-N2-SPL

## ORDERING INFORMATION - PARTS

---

### Parts

To order parts, the following information should be included:

1. Quantity
2. Part name, i.e., disc insert
3. Size, series and valve number
4. Shop number (from valve nameplate)
5. Serial number (from valve nameplate)
6. Original purchase order number (if shop number has been destroyed).

Sample nameplate  
(for illustrative purposes only)

Emerson provides special 'fast response' delivery service of spare parts to satisfy unplanned parts requirements which can be initiated by contacting your local representative. Emergency delivery service is available direct from the factory, 24 hours a day, 7 days a week.

### Springs with washers

To order springs with washers, in addition to the other information included for 'Parts', the required valve set pressure must also be specified. If the spring is for a non-bellows valve, and there is a constant back pressure condition, that should also be specified as should the spring material, if other than standard.

### Replacement valves

To replace a valve in service, the shop number, serial number, set pressure and previous order number should be specified.

## SIZING AND SELECTION

---

### PRESSURE RELIEF DEVICE SIZING AND SELECTION SOFTWARE

---

Emerson PRV<sup>2</sup>SIZE incorporates over 135 years of experience and engineering expertise for an extensive array of Anderson Greenwood, Crosby and Varec pressure relief devices and related products in one software package. It enables you to address numerous applications in a single sizing and selection platform without the need to use two or more sizing programs.

#### Emerson PRV<sup>2</sup>SIZE features:

- User-friendly interface
  - Sizing calculations can be saved at any point
  - Multiple tags can be opened at one time
- Ability to sort data using a variety of parameters
- Fully configured product selection
- Industry standard sizing methodologies
- Drop-down boxes allow instantaneous change of sizing methodology from API to ASME and vice-versa
- 2:1 elliptical head tanks for fire sizing applications
- Catalog integration from existing product literature PDF's
- Detailed product specifications including cross sectional drawings with dimensions and weights
  - U.S. Customary System and metric units
- Advanced tools to export and import device tag numbers with the ability to mail files directly from the software program
- Combination device, reaction force and noise level calculations
- Flow curves for pressure and vacuum relief valves
- Individual capsule summaries of each product including an image of the selected product

Another unique feature of Emerson PRV<sup>2</sup>SIZE is its capability to provide sizing and selection for tank protection and tank blanketing products in a single software program. This includes pad and de-pad valves, tank blanketing regulators, pressure/vacuum vents and low pressure pilot operated relief valves.
